Chapter 1

Main Page

This is the OpenCL version of JTC extra stuff

1.1 Introduction

The rapid development of parallel hardware in the last decade requires a constant evaluation of the parallel algorithms used in large scale scientific applications . Iterative kernels are essential components of iterative solvers which are the preferred technique in a variety of large scale problems. Jacobi iteration for the second order discretisation of the Laplacian 3D operator:

$$u_{i,j,k}^{(new)} = \frac{1}{6}(u_{i-1,j,k}^{(old)} + u_{i+1,j,k}^{(old)} + u_{i,j-1,k}^{(old)} + u_{i,j+1,k}^{(old)} + u_{i,j,k-1}^{(old)} + u_{i,j,k+1}^{(old)}) , \quad (1.1)$$

is the one of the simplest, yet not trivial, example of iterative kernel. In its simple form it contains the features relevant to the performance for a large class of iterators: i) stranded memory access and ii) low number of floating point operations per memory reference.

1.2 Results

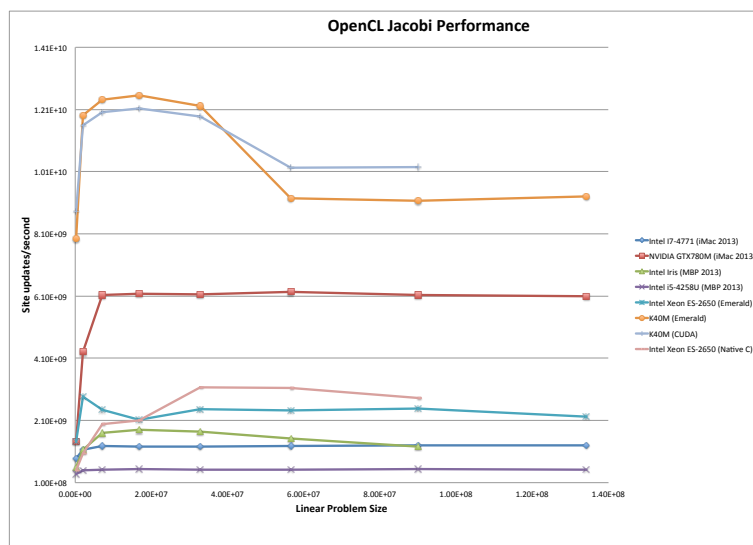

Figure 1.1: My application

Chapter 2

Todo List

File [jacobi_opencl.h](#)

Include header files to grab typename Real

File [jacobi_relaxation_ocl.cl](#)

include the header to grab the typedef of Real

Global [OpenCL_Jacobi](#) (int Nx, int Ny, int Nx, Real *unknown)

modify prototype to pass in opencl struct

Global [OpenCL_Jacobi_Iteration](#) (int maxIters, int convergencelters)

Fix this memory transfer

Chapter 3

Data Structure Index

3.1 Data Structures

Here are the data structures with brief descriptions:

OpenCLInstance	9
------------------------------------------	---

Chapter 4

File Index

4.1 File List

Here is a list of all files with brief descriptions:

jacobi_opencl.c	11
jacobi_opencl.h	12
jacobi_relaxation_ocl.cl	13

Chapter 5

Data Structure Documentation

5.1 OpenCLInstance Struct Reference

```
#include <jacobi_opencl.h>
```

Data Fields

- cl_device_id [device_id](#)
- cl_context [context](#)
- cl_command_queue [commands](#)
- cl_program [program](#)
- cl_kernel [jacobi_ocl](#)
- cl_mem [d_u1](#)
- cl_mem [d_u2](#)
- unsigned int [xDim](#)
- unsigned int [yDim](#)
- unsigned int [zDim](#)

5.1.1 Detailed Description

[OpenCLInstance](#) - A struct containing the device ide, context, command queue, program, kernel and problem size for OpenCL

Definition at line 37 of file `jacobi_opencl.h`.

5.1.2 Field Documentation

5.1.2.1 cl_command_queue OpenCLInstance::commands

Compute command queue

Definition at line 40 of file `jacobi_opencl.h`.

5.1.2.2 cl_context OpenCLInstance::context

Compute context

Definition at line 39 of file `jacobi_opencl.h`.

5.1.2.3 `cl_mem OpenCLInstance::d_u1`

Device memory used for the input unknown 1 vector

Definition at line 44 of file `jacobi_opencl.h`.

5.1.2.4 `cl_mem OpenCLInstance::d_u2`

Device memory used for the input unknown 2 vector

Definition at line 45 of file `jacobi_opencl.h`.

5.1.2.5 `cl_device_id OpenCLInstance::device_id`

Compute device id

Definition at line 38 of file `jacobi_opencl.h`.

5.1.2.6 `cl_kernel OpenCLInstance::jacobi_ocl`

Compute kernel

Definition at line 42 of file `jacobi_opencl.h`.

5.1.2.7 `cl_program OpenCLInstance::program`

Compute program

Definition at line 41 of file `jacobi_opencl.h`.

5.1.2.8 `unsigned int OpenCLInstance::xDim`

Definition at line 47 of file `jacobi_opencl.h`.

5.1.2.9 `unsigned int OpenCLInstance::yDim`

Definition at line 47 of file `jacobi_opencl.h`.

5.1.2.10 `unsigned int OpenCLInstance::zDim`

Grid dimensions

Definition at line 47 of file `jacobi_opencl.h`.

The documentation for this struct was generated from the following file:

- [jacobi_opencl.h](#)

Chapter 6

File Documentation

6.1 jacobi_opencl.c File Reference

```
#include "jacobi_opencl.h"  
#include "../jacobi_c.h"  
#include <CL/cl.h>
```

Macros

- #define [DEVICE](#) CL_DEVICE_TYPE_DEFAULT

Functions

- int [output_device_info](#) (cl_device_id)
- char * [err_code](#) (cl_int)
- void [OpenCL_Jacobi](#) (int Nx, int Ny, int Nx, Real *unknown)
- void [OpenCL_Jacobi_Iteration](#) (int maxIters, int convergencelters)

6.1.1 Detailed Description

Copyright (C) 2014 Mark Mawson

Author: Mark Mawson mark.mawson@stfc.ac.uk

Definition in file [jacobi_opencl.c](#).

6.1.2 Macro Definition Documentation

6.1.2.1 #define DEVICE CL_DEVICE_TYPE_DEFAULT

Definition at line 21 of file jacobi_opencl.c.

6.1.3 Function Documentation

6.1.3.1 char* err_code (cl_int)

6.1.3.2 void OpenCL_Jacobi (int *Nx*, int *Ny*, int *Nx*, Real * *unknown*)

Todo modify prototype to pass in opencl struct

Definition at line 31 of file jacobi_opencl.c.

6.1.3.3 void OpenCL_Jacobi_Iteration (int *maxIters*, int *convergenceIters*)

OpenCL_Jacobi_Iteration –

Parameters

<i>maxIters</i>	- The maximum number of iterations to perform
<i>convergenceIters</i>	- the number of iteration between convergence checks

Todo Fix this memory transfer

Definition at line 152 of file jacobi_opencl.c.

6.1.3.4 int output_device_info (cl_device_id)

6.2 jacobi_opencl.h File Reference

```
#include "../"
```

Data Structures

- struct [OpenCLInstance](#)

Functions

- void [OpenCL_Jacobi](#) (int *Nx*, int *Ny*, int *Nx*, Real **unknown*)
- void [OpenCL_Jacobi_Iteration](#) (int *maxIters*, int *convergenceIters*)

6.2.1 Detailed Description

Copyright (C) 2014 Mark Mawson

Author: Mark Mawson mark.mawson@stfc.ac.uk

Todo Include header files to grab typename Real

Definition in file [jacobi_opencl.h](#).

6.2.2 Function Documentation

6.2.2.1 void OpenCL_Jacobi (int *Nx*, int *Ny*, int *Nx*, Real * *unknown*)

OpenCLJacobi – Initialise the OpenCL runtime and perform memcopies

Parameters

<i>Nx</i>	- The x size of the domain.
<i>Ny</i>	- The y size of the domain.
<i>Nz</i>	- The z size of the domain.
<i>unknown</i>	- The initial conditions

Todo modify prototype to pass in opencl struct

Definition at line 31 of file jacobi_opencl.c.

6.2.2.2 void OpenCL_Jacobi_Iteration (int *maxIters*, int *convergenceIters*)

OpenCL_Jacobi_Iteration –

Parameters

<i>maxIters</i>	- The maximum number of iterations to perform
<i>convergenceIters</i>	- the number of iteration between convergence checks

Todo Fix this memory transfer

Definition at line 152 of file jacobi_opencl.c.

6.3 jacobi_relaxation_ocl.cl File Reference

```
#include "../jacobi_c.h"
```

Functions

- `__kernel void jacobi_relaxation_ocl (const int Nx, const int Ny, const int Nz, global const Real *restrict d_u1, global Real *restrict d_u2)`

6.3.1 Detailed Description

This file contains the single and double precision kernel calls

Todo include the header to grab the typedef of Real

Definition in file [jacobi_relaxation_ocl.cl](#).

6.3.2 Function Documentation

6.3.2.1 `__kernel void jacobi_relaxation_ocl (const int Nx, const int Ny, const int Nz, global const Real *restrict d_u1, global Real *restrict d_u2)`

`jacobi_relaxation_ocl` –

Parameters

N_x	- The x size of the domain
N_y	- The y size of the domain
N_z	- The z size of the domain
d_u1	- The input array
d_u2	- The output array

Definition at line 14 of file jacobi_relaxation_ocl.cl.
